

Startup accelerator programs

Advance Your Startup

RocketSpace's startup accelerator programs bring together the industry's most disruptive startups and progressive corporates to fuel cross-industry innovation and set a new standard for industry innovation. Unlike other accelerator programs, this program is designed to be an ongoing innovation platform that will result in a continuous stream of commercially viable solutions. Startups in the program will have the opportunity to work hand-in-hand with the corporate collaborators in a dedicated product validation program.

Unparalleled Benefits

Zero equity requirements

Unlike other programs, equity is not required from startups, which allows RocketSpace to drive a successful program without any bias actions in program design.

Expand industry knowledge

A tailored, virtual curriculum will be provided for each startup cohort. This phase may include industry snapshots, pilot coaching, and corporate workshops.

Validate your product

A product validation phase is included to advance corporate-startup partnerships. Participating startups are able to test their technologies with corporate collaborators.

Access to investment opportunities

Throughout the program, startups will have ongoing meetings with corporate collaborators, be able to pilot test solutions, and explore partnership opportunities.

Minimal Requirements

- Seed funded startups preferred
- Product in marketing or ready to launch
- Connection to tech cohort themes
- Some travel required

Cohort Stages

A five-year program with two six-month startup cohorts annually, each focusing on different industry tech themes.

What Startup Alumni Have to Say

"The interaction between corporates and startups in this program is very valuable. You will get feedback immediately from the corporates about your product. For us, this was the main thing that attracted us to the RocketSpace Accelerator Program."
